App — New Book a Shoot Flow

All APIs require normal client authorization headers:

Authorization: {{TOKEN}}
device_type: android
user_type_name: client
user_type: 3

The app must keep `booking_id` returned from Screen 1 and use it in every following API.

Screen 1 — Select Content Type

Show these three options:

- Videography
- Photography
- Photography and Videography

When the user taps **Continue**, create or update the draft booking.

POST /bookings

Videography

```
{
  "content_type": "videographer"
}
```

Photography

```
{
  "content_type": "photographer"
}
```

Photography and Videography

```
{
  "content_type": "photographer,videographer"
}
```

Save `data.booking_id` from the response.

Editing an Existing Draft

If the user goes back to Screen 1 and changes the content type, call the same endpoint with the existing booking ID.

POST /bookings

{

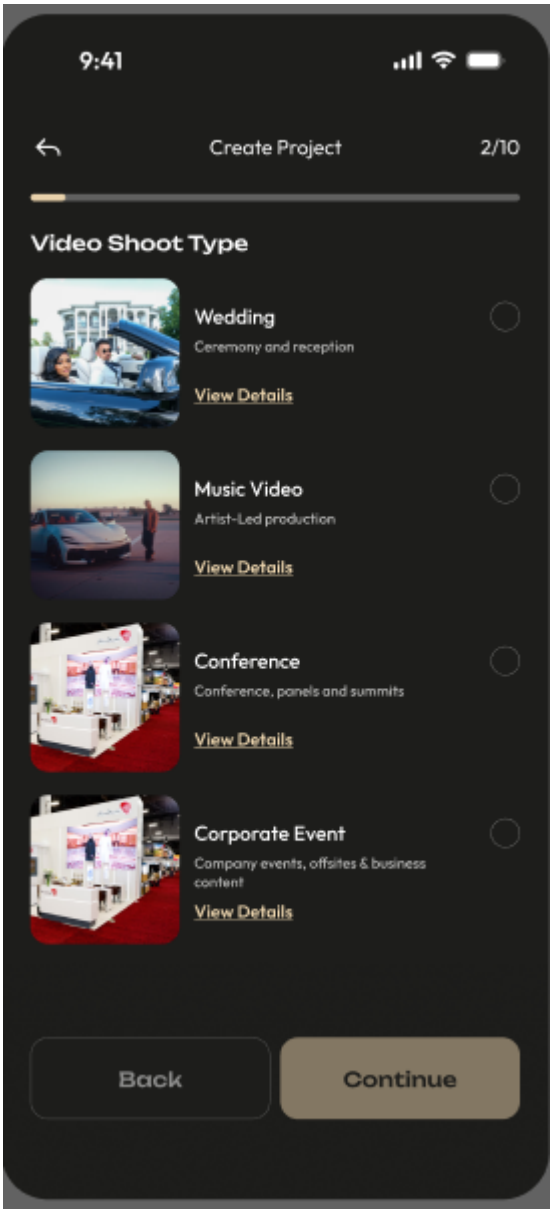

"booking_id": 1449,

"content_type": "photographer,videographer"

}

When the content type changes, the backend resets the selected shoot type, crew count, and selected editing services. Continue again from Screen 2 — Select Shoot Type.

Screen 2 — Select Shoot Type

Load the shared web shoot-type catalogue when this screen opens.

GET /bookings/shoot-types

This API returns the same shoot types for every content type, for example:

- Wedding
- Music Video
- Conference
- Corporate
- Private Event
- Birthday Party
- Funeral / Memorial
- Real Estate
- Brand / Promotional

- Product
- Other

The API response includes the card name, subtitle/description, image, and display order.

When the user selects a card and taps **Continue**, save the selected shoot type by its name.

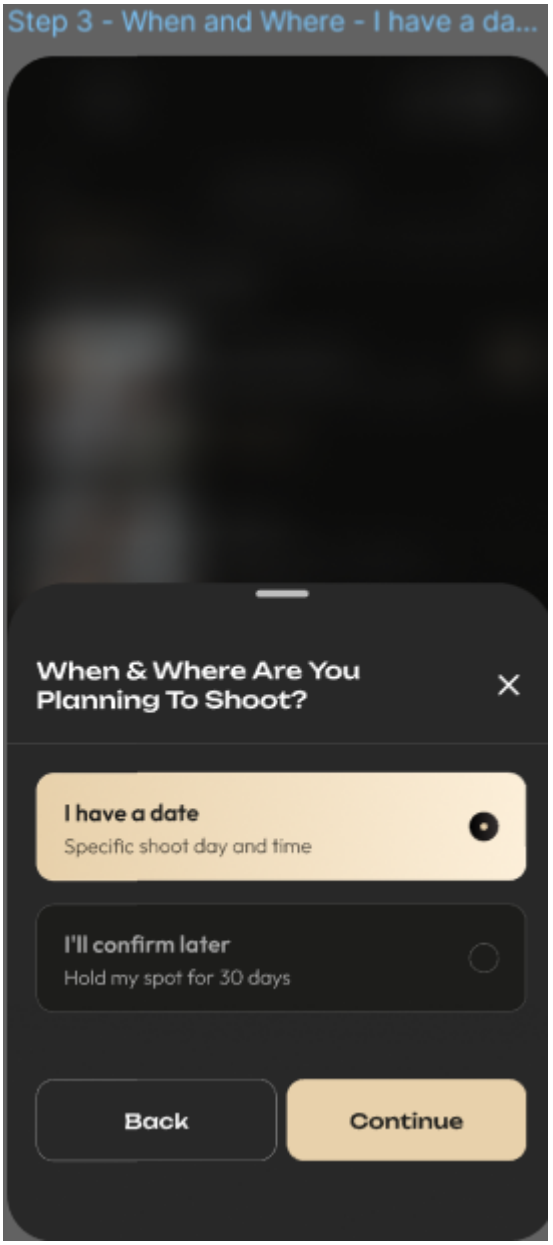

POST /bookings/:bookingId
{
  "shoot_type": "Wedding"
}

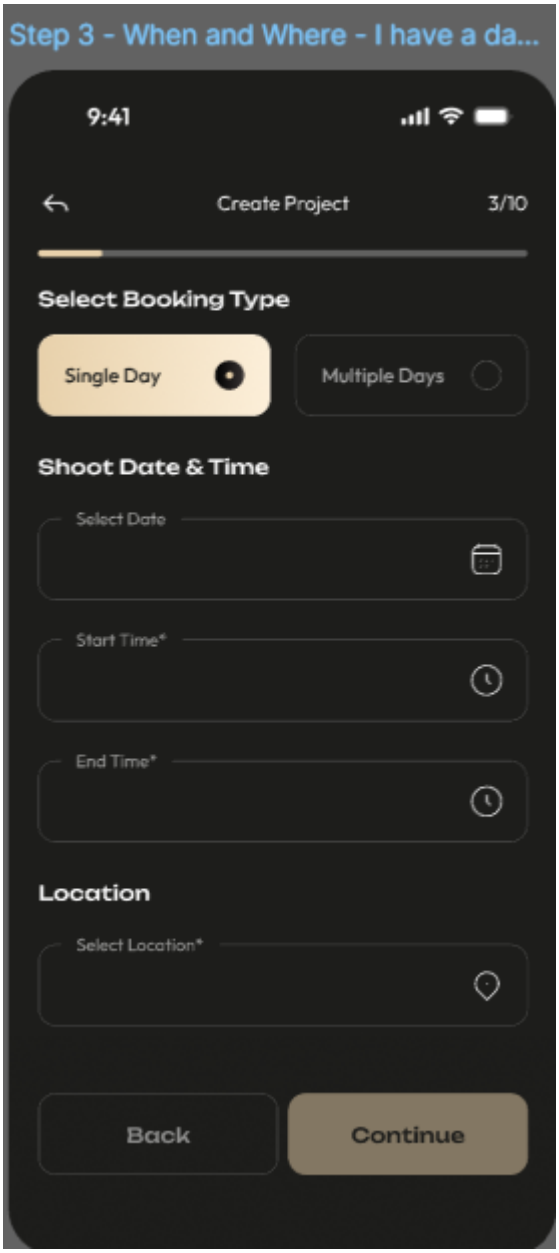

Do not send `shoot_type_id` from mobile. Send the exact `shoot_type` name returned by the catalogue API.

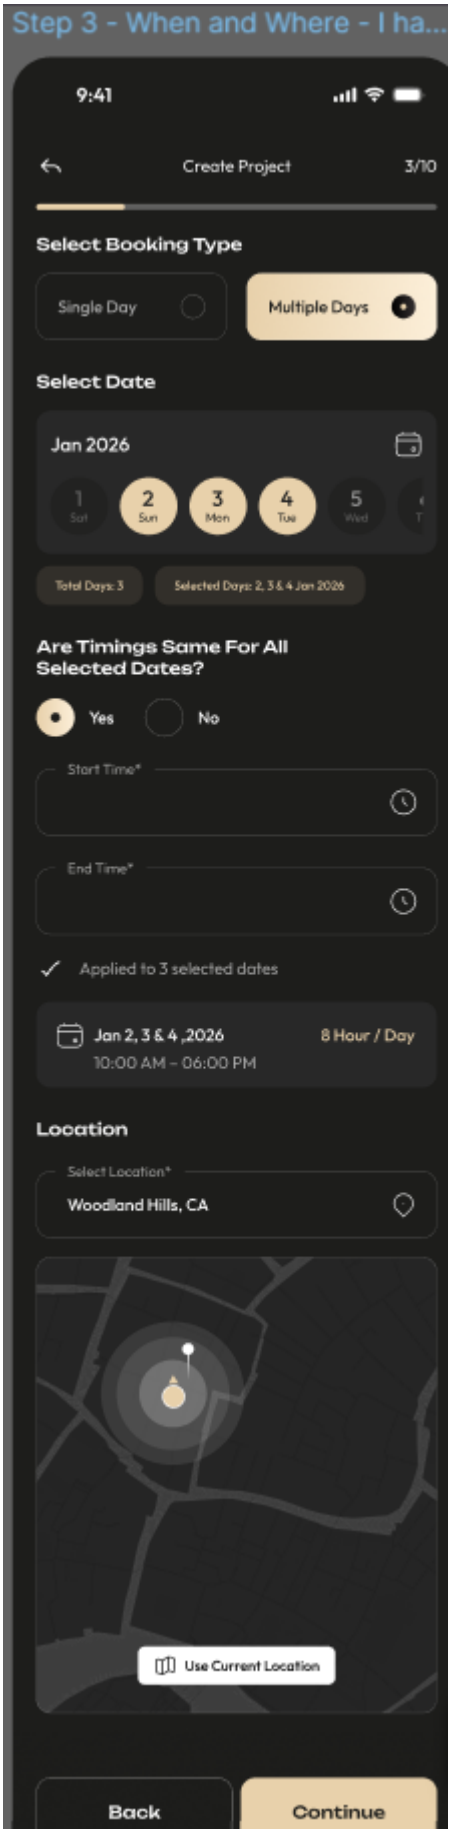

Screen 3 — Date, Time, Timezone, and Location

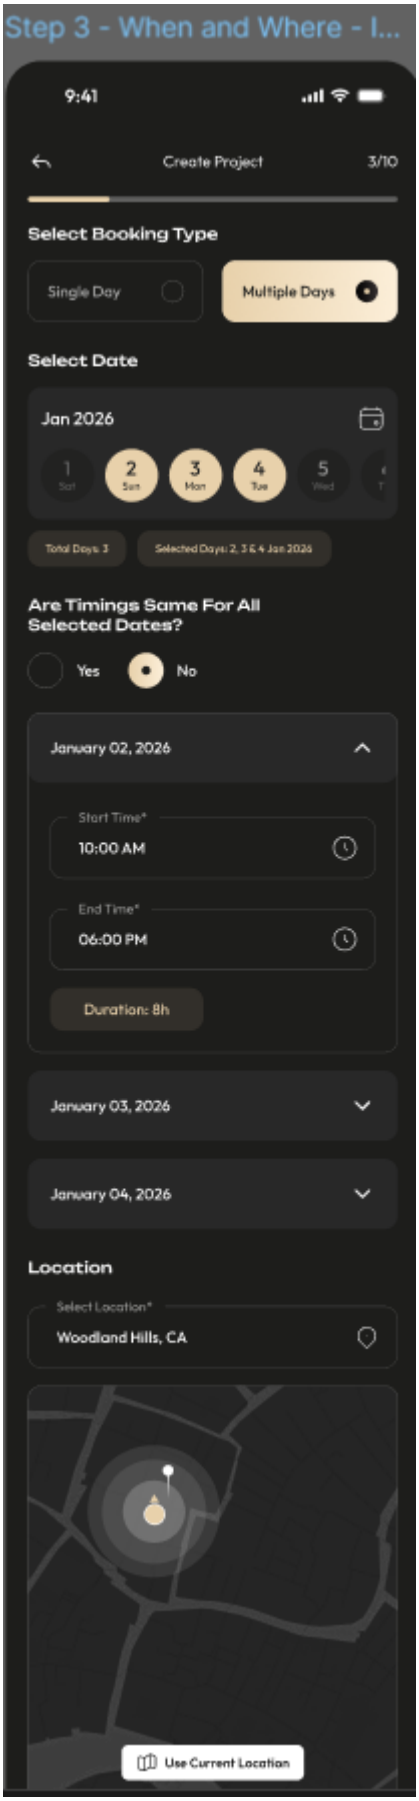

This screen has two paths.

A. User selects “I have a date”

Step 3 - When and Where - I have a da...
When & Where Are You Planning To Shoot?
I have a date
Specific shoot day and time
I'll confirm later
Hold my spot for 30 days

Select Location*
Woodland Hills, CA
Use Current Location

When the user selects date, time, timezone, and location, call:

```
PUT /bookings/:bookingId/time
{
  "event_date": "2026-10-08",
  "start_time": "09:00",
  "end_time": "17:00",
  "time_zone": "Asia/Calcutta",
  "event_location": "550 West 5th Street, Los Angeles, California 90013, United States",
  "event_latitude": 34.05025748,
  "event_longitude": -118.25407363
}
```

B. User selects “I’ll choose later”

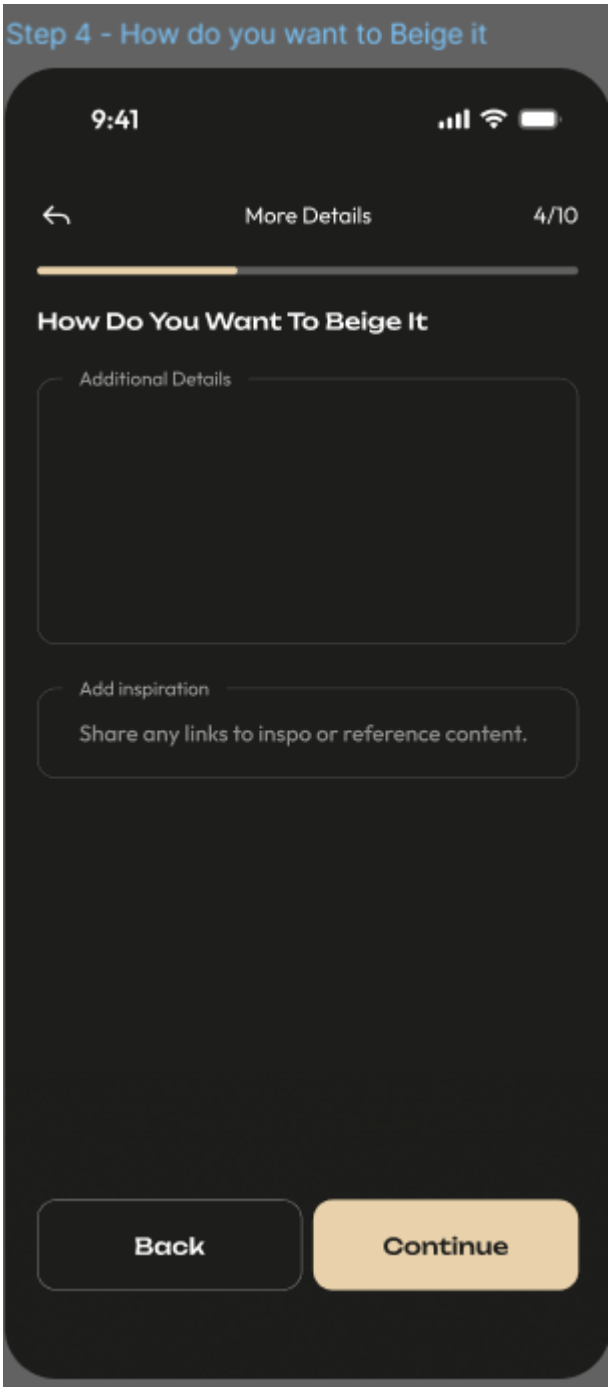

Do not send date or time. Save timezone and location, and explicitly set `confirm_later: true`.

PUT /bookings/:bookingId/time
{
  "confirm_later": true,
  "booking_type": "single_day",
  "booking_days": [],
  "time_zone": "Asia/Calcutta",
  "event_location": "550 West 5th Street, Los Angeles, California 90013, United States",
  "event_latitude": 34.05025748,
  "event_longitude": -118.25407363
}

This booking can still continue to quote and payment without a date/time. The client can provide the final schedule later.

Screen 4 — Additional Details and Reference Links

Show:

- Additional details textarea

- Reference links / inspiration links

When the user taps **Continue**, save these values.

```
PUT /bookings/:bookingId/details
{
  "additional_details": "Outdoor shoot, parking needed",
  "reference_links": [
    "https://example.com/moodboard",
    "https://drive.google.com/example"
  ]
}
```

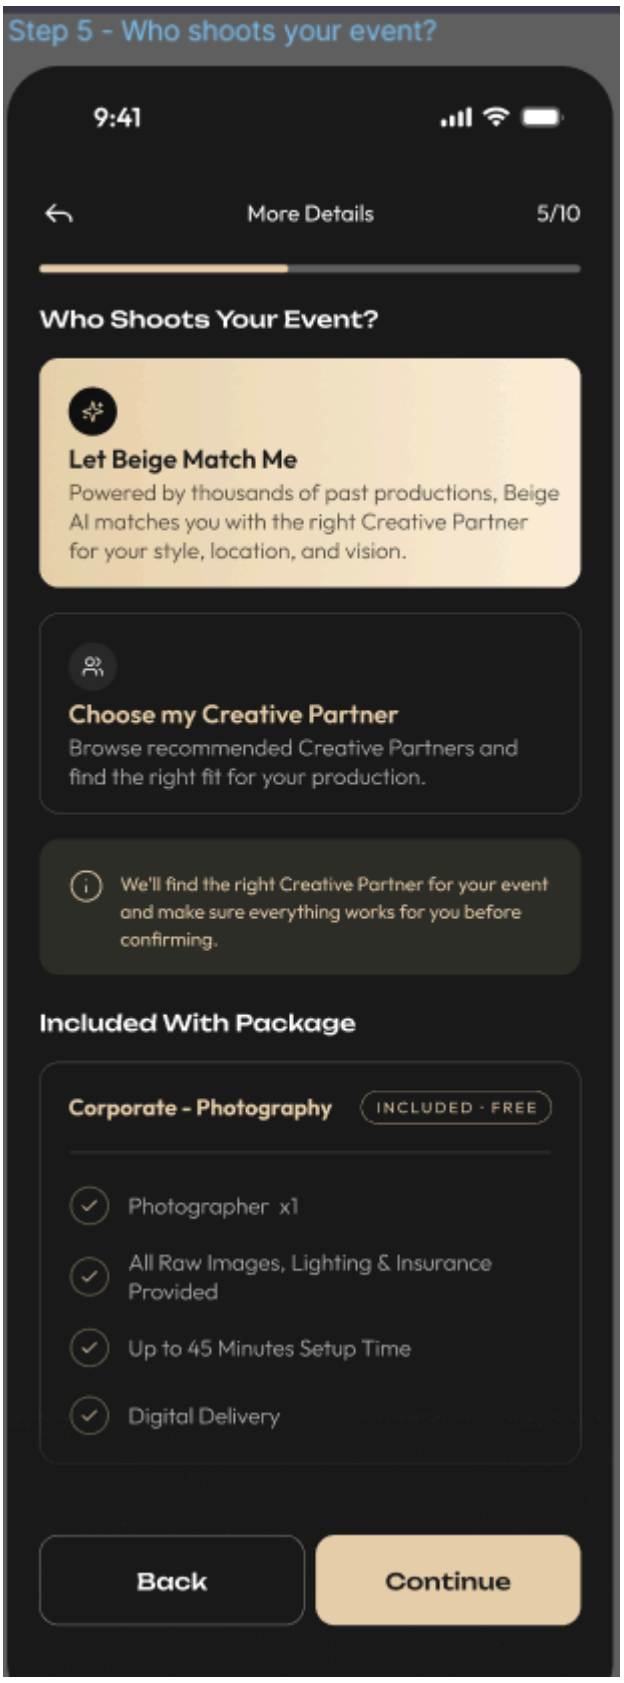

If no links are added, send an empty array:

```
{
  "additional_details": "Outdoor shoot",
  "reference_links": []
}
```

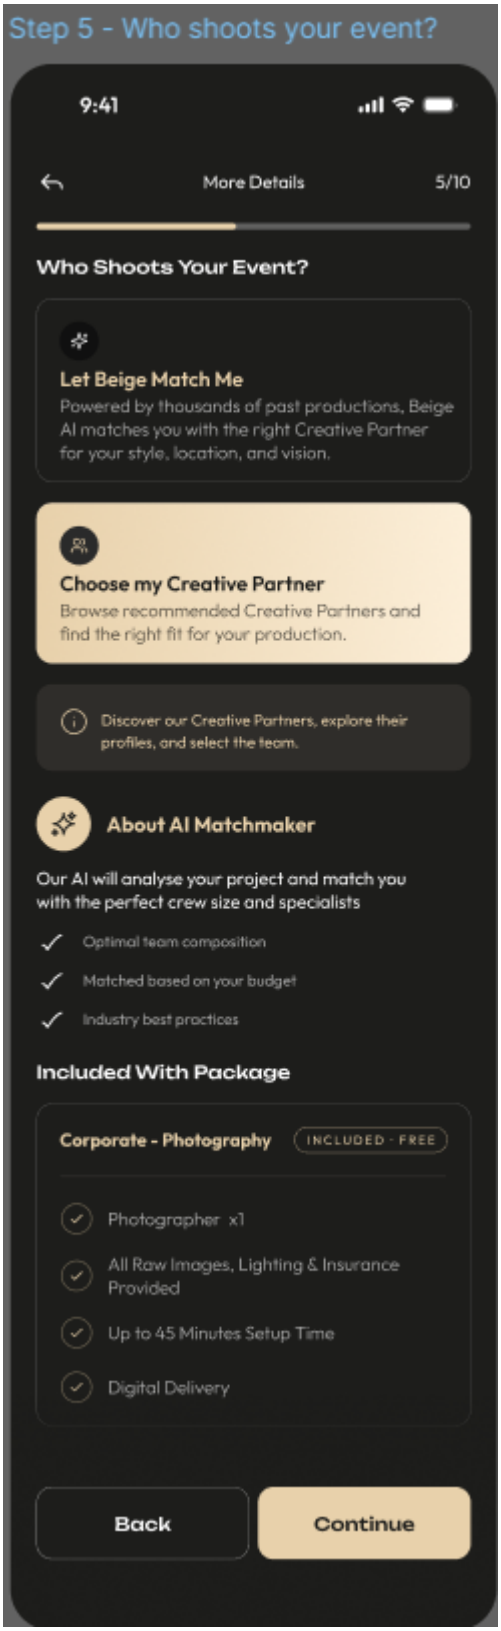

Screen 5 — Matching Choice

Show two options:

1. **Let Beige Match Me**

2. **Choose My Creative Partner**

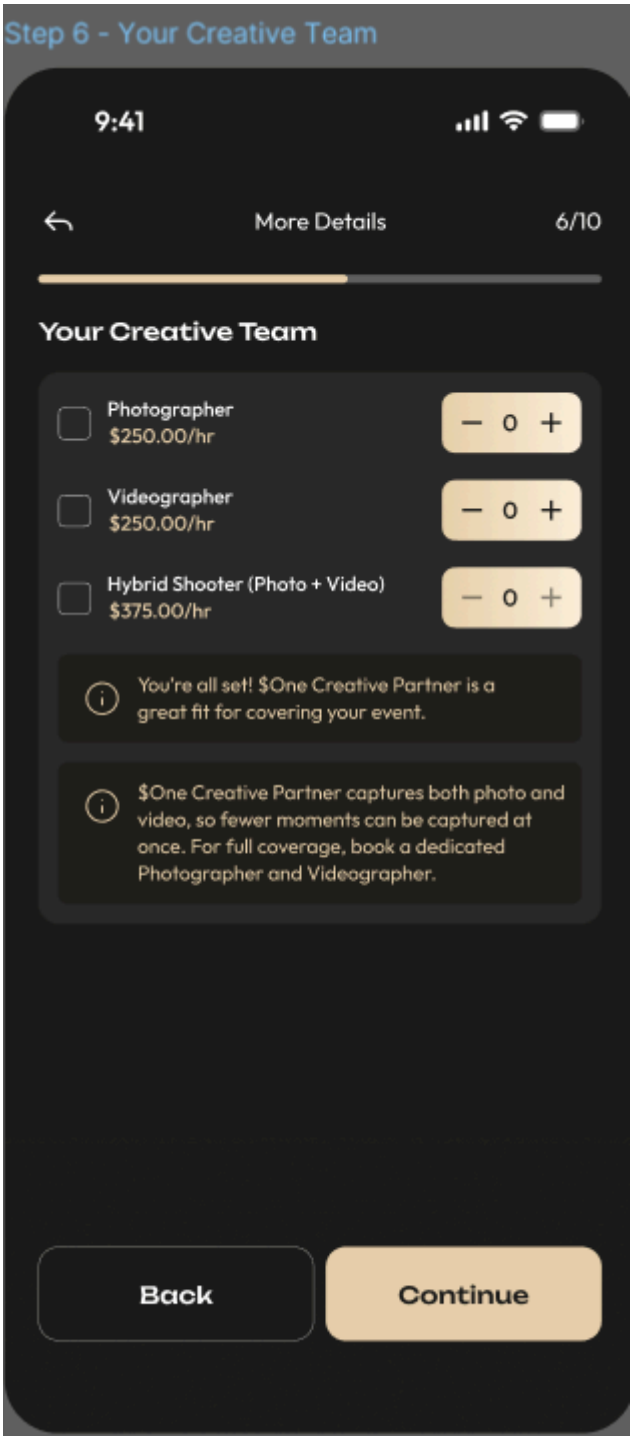

There is **no API call on this screen**.

Keep the selected option in frontend state and use it later on the final submit API.

Both options continue to Screen 6.

Screen 6 — Crew Count

Show crew-count rows based on the selected Content Type:

- **Videography:** Videographer only
- **Photography:** Photographer only

- **Photography + Videography:** Photographer, Videographer, and Hybrid Shooter (Photo + Video)

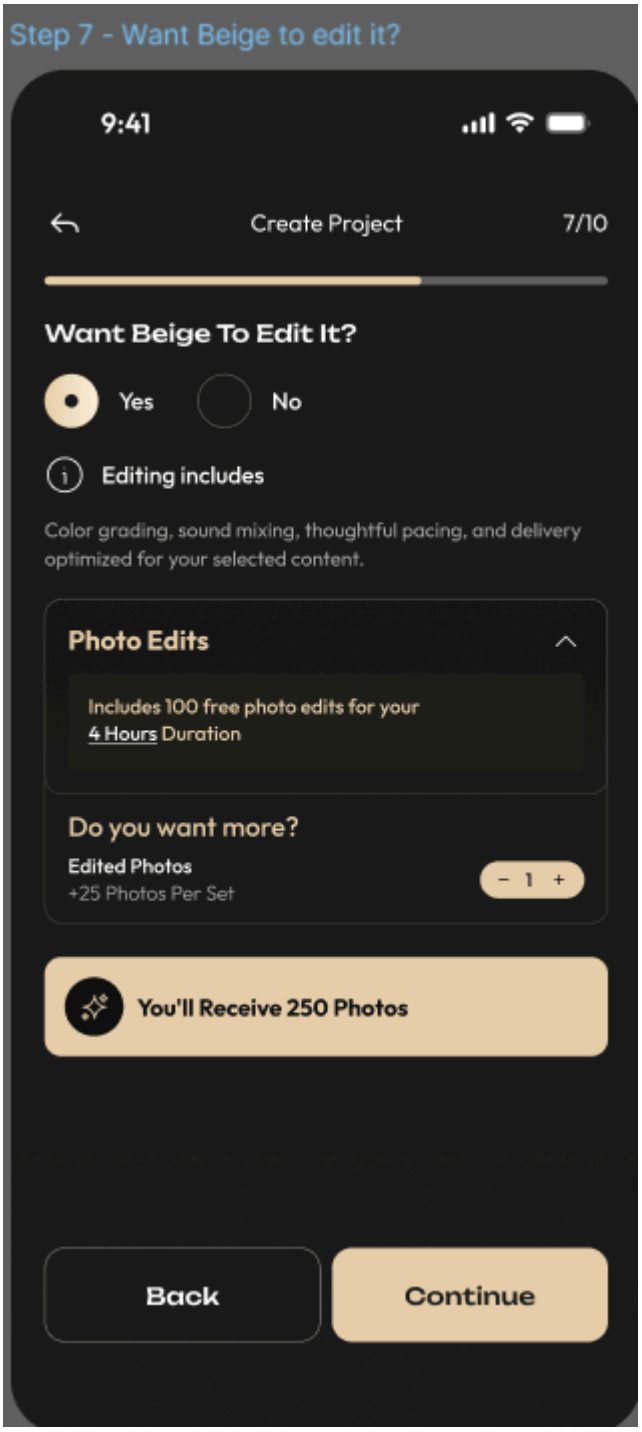

When the user taps Continue, save the total selected crew counts.

```
PUT /bookings/:bookingId/crew
{
  "role_counts": {
    "photographer": 1,
    "videographer": 1,
    "photoVideoCreator": 1
  }
}
```

Important:

- These are the total creators required for the shoot.
- `photoVideoCreator` represents one Hybrid Shooter who covers both photo and video.
- Send `0` for roles not selected.
- Save this before opening the edits screen or creative-partner screen.

Screen 7 — Select Edits

First load edit types based on the selected content type.

Videography

GET /bookings/edit-types?content_type=videographer

Use `video_edit_types` from the response.

Photography

GET /bookings/edit-types?content_type=photographer

Use `photo_edit_types` from the response.

Photography and Videography

GET /bookings/edit-types?content_type=photographer,videographer

Show both `video_edit_types` and `photo_edit_types`.

When the user taps **Continue**, save the selected edit keys.

```
PUT /bookings/:bookingId/edits
{
  "edits_needed": true,
  "video_edit_types": [
    "highlight_video_4_7",
    "feature_video_10_20"
  ],
  "photo_edit_types": [
    "edited_photos"
  ]
}
```

If the user does not need edits:

```
{
  "edits_needed": false,
  "video_edit_types": [],
  "photo_edit_types": []
}
```

Use the exact `key` returned by the edit-types API. Do not create or rename keys in the app.

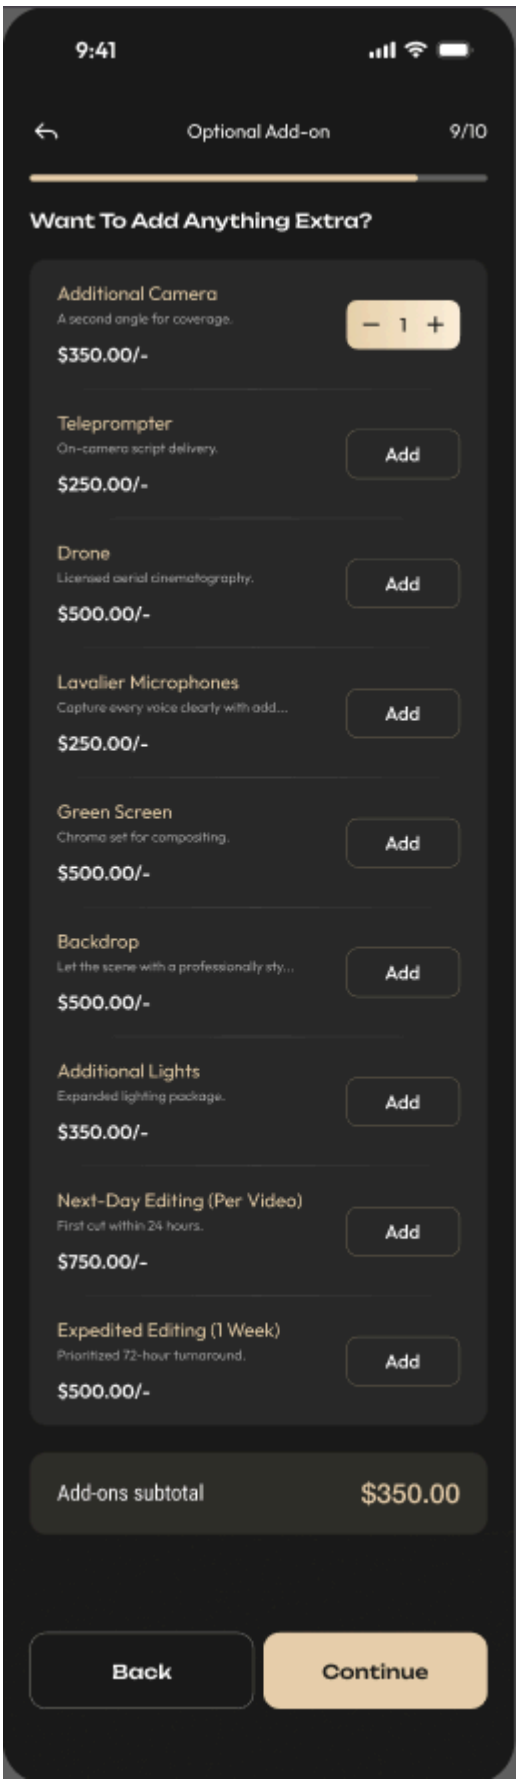

Branch A — Let Beige Match Me

After Screen 7, follow this order:

1. Screen 8 — Add-ons
2. Screen 9 — Review and Contact Information
3. Payment screen

There is no creative-partner selection screen in this branch.

Screen 8 — Add-ons

Load active web-v4 add-ons when the screen opens.

GET /bookings/addons

Keep selected add-ons in frontend state. Do not save them immediately.

Example frontend state:

```
"items": [
    {
      "item_id": 100,
      "name": "Additional Camera",
      "slug": "v4-additional-camera",
      "rate": 350,
      "rate_type": "flat",
      "rate_unit": null,
      "description": "A second angle for coverage.",
      "min_quantity": 0,
      "max_quantity": null,
      "display_order": 101
    },
    {
      "item_id": 101,
      "name": "Teleprompter",
      "slug": "v4-teleprompter",
      "rate": 250,
      "rate_type": "flat",
      "rate_unit": null,
      "description": "On-camera script delivery.",
      "min_quantity": 0,
      "max_quantity": null,
      "display_order": 102
    },
    {
      "item_id": 102,
      "name": "Drone",
      "slug": "v4-drone",
      "rate": 500,
      "rate_type": "flat",
      "rate_unit": null,
      "description": "Licensed aerial cinematography.",
      "min_quantity": 0,
      "max_quantity": null,
      "display_order": 103
    },
    {
```

```
      "item_id": 103,
      "name": "Additional Lavalier Microphones",
      "slug": "v4-lavalier-mics",
      "rate": 250,
      "rate_type": "flat",
      "rate_unit": null,
      "description": "Capture every voice clearly with additional professional lavalier microphones.",
      "min_quantity": 0,
      "max_quantity": null,
      "display_order": 104
    },
    {
      "item_id": 104,
      "name": "Green Screen",
      "slug": "v4-green-screen",
      "rate": 500,
      "rate_type": "flat",
      "rate_unit": null,
      "description": "Chroma set for compositing.",
      "min_quantity": 0,
      "max_quantity": null,
      "display_order": 105
    },
    {
      "item_id": 105,
      "name": "Backdrop",
      "slug": "v4-backdrop",
      "rate": 500,
      "rate_type": "flat",
      "rate_unit": null,
      "description": "Set the scene with a professionally styled backdrop for your shoot.",
      "min_quantity": 0,
      "max_quantity": null,
      "display_order": 106
    },
    {
      "item_id": 106,
      "name": "Additional Lights",
      "slug": "v4-additional-lights",
      "rate": 350,
      "rate_type": "flat",
      "rate_unit": null,
```

```
    "description": "Expanded lighting package.",
    "min_quantity": 0,
    "max_quantity": null,
    "display_order": 107
  },
  {
    "item_id": 107,
    "name": "Next-Day Editing (Per Video)",
    "slug": "v4-next-day-editing",
    "rate": 750,
    "rate_type": "flat",
    "rate_unit": "per video",
    "description": "First cut within 24 hours.",
    "min_quantity": 0,
    "max_quantity": null,
    "display_order": 108
  },
  {
    "item_id": 108,
    "name": "Expedited Editing (1 Week)",
    "slug": "v4-expedited-editing",
    "rate": 500,
    "rate_type": "flat",
    "rate_unit": null,
    "description": "Prioritized one-week turnaround.",
    "min_quantity": 0,
    "max_quantity": null,
    "display_order": 109
  }
]
```

The selected add-ons are sent on the Review screen.

Screen 9 — Review & Confirm

Step 10 - Review & Confirm

9:41

Book & Confirm 10/10

    }
  ]
}
```

Response mapping

UI field	Response field
Project image	`data.project.image_url`

Content Type	`data.project.content_type_label`
Shoot title	`data.project.title`
Shoot subtitle	`data.project.subtitle`
Shoot type tag	`data.project.tag`
Date / time / duration / location	`data.schedule.*`
Date to be decided	`data.schedule.is_date_to_be_decided`
Video Edits	`data.editing_services.video_edits`
Photo Edits	`data.editing_services.photo_edits`
You’ll Receive text	`data.editing_services.receive_text`
Pre-fill Full Name / Email / Phone	`data.contact.*`
Package service heading	`data.package_summary.service.label`
Included creators	`data.package_summary.included_crew`

Included Photos / Videos	`data.package_summary.editing.*`
Package Total To Pay	`data.package_summary.total_to_pay`
Pricing Summary rows	`data.pricing_summary.items`
Sub Total	`data.pricing_summary.subtotal`
Card Payment Charges	`data.pricing_summary.card_processing_fee`
Card charge percentage	`data.pricing_summary.card_processing_fee_percent`
Final Amount / Pay button amount	`data.pricing_summary.final_amount`

`Package Offer` accordion content is static frontend content. Do not expect a Package Offer list from the API.

`data.pricing_summary.items` is item-wise server-calculated pricing. Each item contains:

{

"label": "Photography",

"quantity": 1,

"unit_price": 250,

"rate_type": "per_hour",

"duration_hours": 12,

```
  "amount": 3000
}
```

For example, frontend can display:

Photography $250/hr × 12 hrs $3,000

Contact Information

Keep contact values in frontend state while the user types.

Do not call an API for every text-field change.

When user taps Pay

Use the same add-on selection in both quote and payment preparation.

1. Save quote

POST /bookings/:bookingId/quote

```
{
  "add_on_items": [
    {
      "slug": "v4-additional-camera",
      "quantity": 1
    },
    {
      "slug": "v4-teleprompter",
      "quantity": 1
    }
  ]
}
```

2. Save contact information and selected Creative Partner IDs

PUT /bookings/:bookingId/submit

{

"full_name": "Harsh Patel",

"email": "harsh@test.com",

"phone": "7777777777",

"matching_method": "ai_matchmaker",

"selected_crew_ids": [2129, 2130]

}

`selected_crew_ids` rules:

- Let Beige Match Me: send `[]`.
- Choose Creative Partner: send selected card IDs.
- Zero, partial, or full creator selection is valid.
- Beige matches remaining required creators after booking submission.
- Do not call creator hold or availability-reservation APIs.

3. Open payment

POST /bookings/:bookingId/paymentsheet

Stripe:

{

"payment_method": "stripe"

}

Commas:

{

"payment_method": "commas"

}

Use returned payment data in the respective Stripe PaymentSheet or Commas checkout flow.

Paid Successful Screen

After the payment provider reports success and the backend webhook verifies payment:

Show:

Paid Successful

Your payment was successful & your shoot is now confirmed.

When user taps **View Summary**, load booking summary.

GET /bookings/:bookingId/summary-details

Booking Summary Details Screen

Use `GET /bookings/:bookingId/summary-details` response to show:

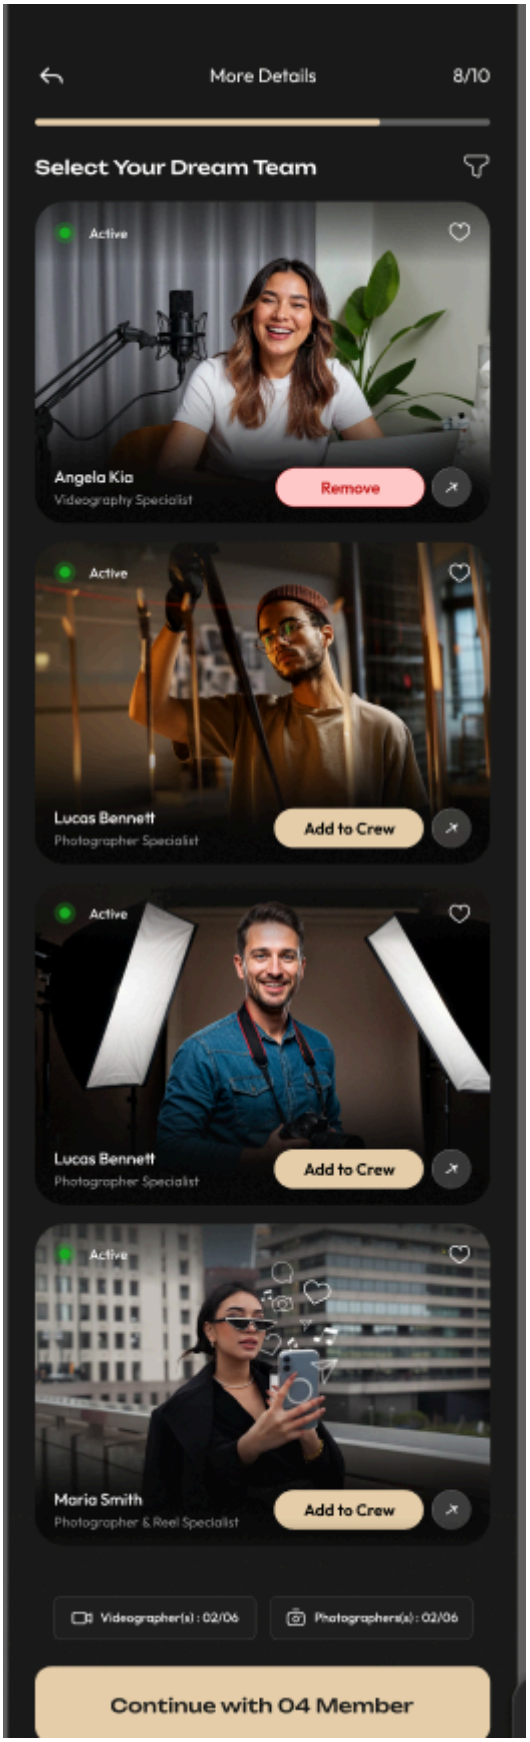

- Project/shoot details
- Date, time, duration, location
- Confirmation number
- Transaction ID
- Payment method
- Back to Home button

Branch B — Choose My Creative Partner

After Screen 7, follow this order:

1. Screen 8 — Choose Your Creative Partner
2. Screen 9 — Add-ons
3. Screen 10 — Review and Contact Information
4. Payment screen

Screen 8 — Choose Your Creative Partner

Load creator cards:

GET /bookings/:bookingId/matches?page=1&limit=12

Use the creator role/capability data returned for each card. Do not decide a creator's role from their name or card title.

The app must keep this frontend-only state:

```
{
  "required_counts": {
    "photographer": 2,
    "videographer": 2
  },
  "assigned_creators": {
    "photographer": [],
    "videographer": []
  },
  "let_beige_choose": false
}
```

`assigned_creators` must store both the creator ID and the UI role where the creator was placed.

Example:

```
{
  "assigned_creators": {
    "photographer": [
      {
        "crew_member_id": 2129
      }
    ],
```

```
    "videographer": [
      {
        "crew_member_id": 2130
      }
    ]
  }
}
```

Show role count buttons

Show one button for every requested role:

Photographer(s): selected / required

Videographer(s): selected / required

Example:

Photographer(s): 1/2

Videographer(s): 2/2

Creator selection logic

Photographer-only creator

If a selected creator supports only Photographer:

Add creator to Photographer count only.

Example:

Photographer(s): 1/2 → 2/2

Videographer-only creator

If a selected creator supports only Videographer:

Add creator to Videographer count only.

Example:

Videographer(s): 0/2 → 1/2

Creator who supports both Photographer and Videographer

If a creator supports both roles, assign them to the role with fewer selected creators.

Example:

Photographer(s): 0/2

Videographer(s): 1/2

Select dual-role creator

→ Assign to Photographer

Another example:

Photographer(s): 2/2

Videographer(s): 1/2

Select dual-role creator

→ Assign to Videographer

If both role counts are equal, assign the dual-role creator to the role with more remaining required slots.

Example:

Photographer(s): 0/2

Videographer(s): 0/1

Select dual-role creator

→ Assign to Photographer, because Photographer has more remaining slots.

If both selected counts and remaining slots are equal, use Photographer as the fixed fallback.

Photographer(s): 0/1

Videographer(s): 0/1

Select dual-role creator

→ Assign to Photographer

If the preferred role is already full, assign the creator to the other supported role if that role still has space.

If all supported role slots are full, disable Add for that creator.

Remove creator logic

When the user removes a creator:

Remove them from the exact role slot where the UI assigned them.

Example:

Selected dual-role creator was assigned to Photographer.

Photographer(s): 2/2

Videographer(s): 1/2

User removes creator

→ Photographer(s): 1/2

→ Videographer remains 1/2

Let Beige Choose checkbox

The **Let Beige Choose** checkbox is frontend/UI state only.

Do not send `let_beige_choose` to backend.

Checkbox is not selected

Enable Continue only when every required role is filled.

Example:

Photographer(s): 2/2

Videographer(s): 2/2

Continue with 4 Creatives

→ Enabled

Example:

Photographer(s): 1/2

Videographer(s): 2/2

Continue

→ Disabled

Checkbox is selected

Enable Continue even if zero creators are selected or some creator slots are still empty.

Example:

Let Beige Choose: selected

Photographer(s): 0/2

Videographer(s): 0/2

Continue with 0 Creatives

→ Enabled

Another example:

Let Beige Choose: selected

Photographer(s): 1/2

Videographer(s): 0/2

Continue with 1 Creative

→ Enabled

Important backend rules

- Do not call hold APIs.
- Do not call availability reservation APIs.
- Do not save selected IDs on this screen.
- Do not send `let_beige_choose` in any API payload.
- Keep selected IDs and UI role assignment in frontend state until final payment submit.

At final Confirm and Pay, send only all selected creator IDs:

```
{
  "full_name": "Harsh Patel",
  "email": "harsh@test.com",
  "phone": "7777777777",
  "matching_method": "ai_matchmaker",
  "selected_crew_ids": [2129, 2130]
}
```

For Let Beige Choose with zero manually selected creators:

```
{
  "full_name": "Harsh Patel",
  "email": "harsh@test.com",
  "phone": "7777777777",
  "matching_method": "ai_matchmaker",
```

"selected_crew_ids": []

}

The UI role assignment is only for showing correct Photographer/Videographer counts and validating Continue. The backend receives only final selected creator IDs, exactly like the web flow.

View Creative Partner Profile

When the user taps **View Profile** on a Creative Partner card, use the `crew_member_id` from the matches response.

GET /creatives/:crewMemberId/profile

Example:

GET /creatives/2129/profile

Optional location query parameters may be sent to calculate distance:

GET /creatives/2129/profile?latitude=34.0502&longitude=-118.2540

This API does not update the booking and does not select the Creative Partner. It only loads profile-detail screen data.

Use response fields:

UI field	Response field
Creator name	`data.creative.name`
Profile image	`data.creative.profile_image_url`

Role	`data.creative.primary_title`
Hourly rate	`data.creative.hourly_rate`
Rating	`data.creative.average_rating`
Total reviews	`data.creative.total_reviews`
Available status	`data.creative.is_active`
Favourite status	`data.creative.is_favourite`
Distance	`data.creative.distance_km`
Client count	`data.stats.clients_count`
Experience	`data.stats.years_experience`
About Creator text	`data.about.bio`

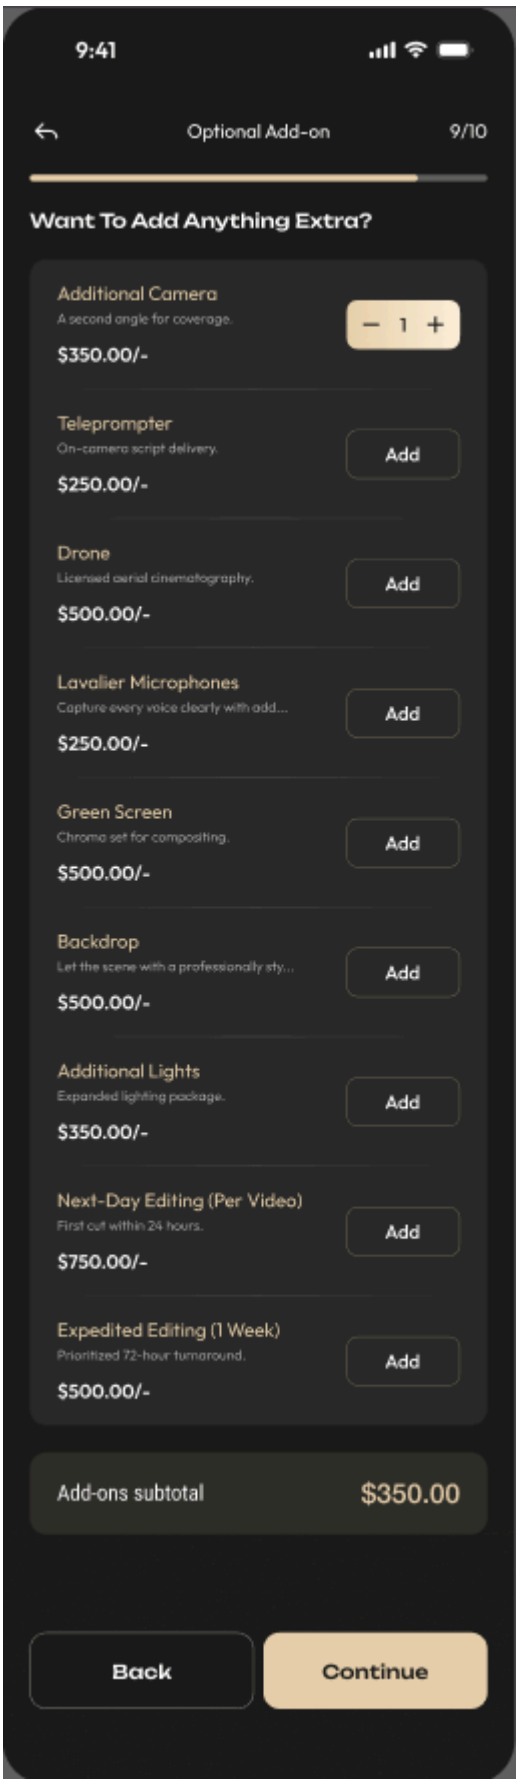

Portfolio images	`data.portfolio_preview`
Weekly Availability	`data.weekly_availability`

Example request response structure:

```
{
  "creative": {
    "id": 2129,
    "crew_member_id": 2129,
    "name": "Angela Kia",
    "profile_image_url": "crew/profile.jpg",
    "primary_title": "Videography Specialist",
    "hourly_rate": 250,
    "average_rating": 4.5,
    "total_reviews": 100,
    "distance_km": 8.2,
    "is_active": true,
    "is_favourite": false
  },
  "stats": {
    "clients_count": null,
    "years_experience": 5,
    "bookings_count": null
  },
```

```
  "about": {
    "bio": "..."
  },
  "portfolio_preview": [],
  "weekly_availability": {},
  "reviews": {
    "breakdown": [],
    "preview": []
  }
}
```

Screen 9 — Add-ons

This is the same as Branch A Screen 8.

GET /bookings/addons

Keep selected add-ons in frontend state.

Screen 10 — Review & Confirm

Step 10 - Review & Confirm

9:41

Book & Confirm 10/10

Package service heading	`data.package_summary.service.label`
Included creators	`data.package_summary.included_crew`

Included Photos / Videos	`data.package_summary.editing.*`
Package Total To Pay	`data.package_summary.total_to_pay`
Pricing Summary rows	`data.pricing_summary.items`
Sub Total	`data.pricing_summary.subtotal`
Card Payment Charges	`data.pricing_summary.card_processing_fee`
Card charge percentage	`data.pricing_summary.card_processing_fee_percent`
Final Amount / Pay button amount	`data.pricing_summary.final_amount`

`Package Offer` accordion content is static frontend content. Do not expect a Package Offer list from the API.

`data.pricing_summary.items` is item-wise server-calculated pricing. Each item contains:

{

"label": "Photography",

"quantity": 1,

"unit_price": 250,

"rate_type": "per_hour",

"duration_hours": 12,

```
  "amount": 3000
}
```

For example, frontend can display:

Photography $250/hr × 12 hrs $3,000

Contact Information

Keep contact values in frontend state while the user types.

Do not call an API for every text-field change.

When user taps Pay

Use the same add-on selection in both quote and payment preparation.

1. Save quote

POST /bookings/:bookingId/quote

```
{
  "add_on_items": [
    {
      "slug": "v4-additional-camera",
      "quantity": 1
    },
    {
      "slug": "v4-teleprompter",
      "quantity": 1
    }
  ]
}
```

2. Save contact information and selected Creative Partner IDs

PUT /bookings/:bookingId/submit

{

"full_name": "Harsh Patel",

"email": "harsh@test.com",

"phone": "7777777777",

"matching_method": "ai_matchmaker",

"selected_crew_ids": [2129, 2130]

}

`selected_crew_ids` rules:

- Let Beige Match Me: send `[]`.
- Choose Creative Partner: send selected card IDs.
- Zero, partial, or full creator selection is valid.
- Beige matches remaining required creators after booking submission.
- Do not call creator hold or availability-reservation APIs.

3. Open payment

POST /bookings/:bookingId/paymentsheet

Stripe:

{

"payment_method": "stripe"

}

Commas:

{

"payment_method": "commas"

}

Use returned payment data in the respective Stripe PaymentSheet or Commas checkout flow.

Paid Successful Screen

After the payment provider reports success and the backend webhook verifies payment:

Show:

Paid Successful

Your payment was successful & your shoot is now confirmed.

When user taps **View Summary**, load booking summary.

GET /bookings/:bookingId/summary-details

Booking Summary Details Screen

Use `GET /bookings/:bookingId/summary-details` response to show:

- Project/shoot details
- Date, time, duration, location
- Confirmation number
- Transaction ID
- Payment method
- Back to Home button

Pricing Logic:

Coverage Pricing

Service	Price
Photographer	$250 per hour
Videographer	$250 per hour
Hybrid Photo + Video Creator	$375 per hour

For more than one creator, total pricing is:

Creator quantity × hourly rate × booking duration

Included Edited Photos:

Content Type	Crew Count	Shoot Type	Included photos
Photography	Photographer: 1	Non-wedding	25/hour
Photography	Photographer: 1	Wedding	50/hour
Photo + Video	Hybrid: 1	Non-wedding	10/hour
Photo + Video	Hybrid: 1	Wedding	10/hour
Photo + Video	Photographer: 1, Videographer: 1	Non-wedding	25/hour
Photo + Video	Photographer: 1, Videographer: 1	Wedding	50/hour
Photo + Video	Photographer: 1, Videographer: 1, Hybrid: 1	Non-wedding	25/hour
Photo + Video	Photographer: 1, Videographer: 1, Hybrid: 1	Wedding	50/hour
Videography	Videographer: 1	Any	No free photos

When both a Photographer and Hybrid Creator are selected, the Photographer rule takes priority.

Included photos remain visible in the booking review even when the client selects “No” for optional editing services.

Editing and Add-ons

Extra edited photos cost $250 per set of 25 photos.

Selected video edits and V4 add-ons are charged according to the active pricing catalog. Editing and add-on charges are included in the quote only when selected.

Fees

Fee	Current Rule
Pre-Production Fee	$250
Setup Time Fee	Not charged
Card Processing Fee	4%

Other Current Rules

Date Later bookings follow the current minimum one-hour pricing behaviour.

Extra and mixed crew pricing is calculated as creator quantity × rate × duration.

Livestream Coverage, Studio Reservation, Consultation, and Editing Only are not included in the current mobile Book a Shoot flow.
